

# Fundamentals of Deep Learning

Part 1: An Introduction to Deep Learning

# Agenda

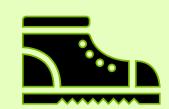

- Part 1: An Introduction to Deep Learning
- Part 2: How a Neural Network Trains
- Part 3: Convolutional Neural Networks
- Part 4: Data Augmentation and Deployment
- Part 5: Pre-Trained Models
- Part 6: Advanced Architectures

# To see lecture notes, make full screen and click the "notes" button

#### The Goals of This Course

Get you up and on your feet quickly

Build a foundation to tackle a deep learning project right away

We won't cover the whole field, but we'll get a great head start

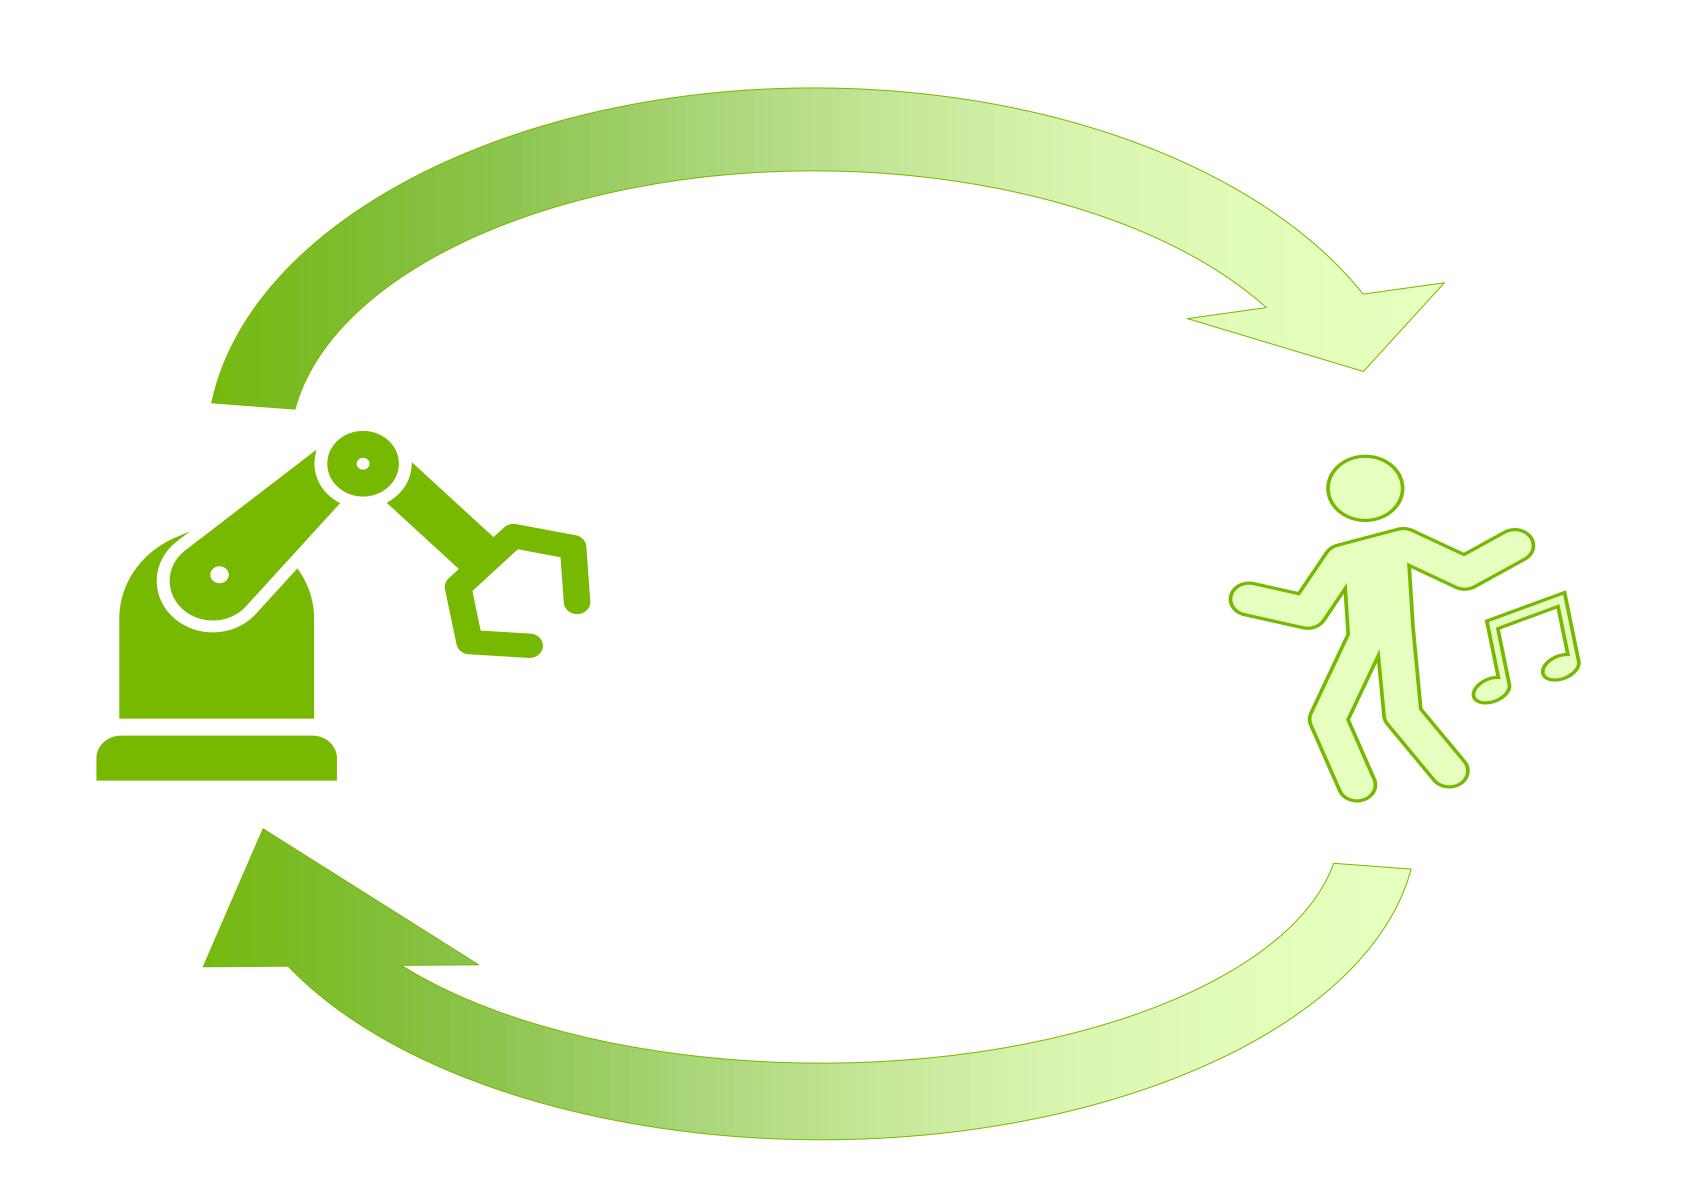

Foundation from which to read articles, follow tutorials, take further classes

## Human Vs Machine Learning

Relaxed Alertness

Human	Machine
Rest and Digest	Training
Fight-or-flight	Prediction

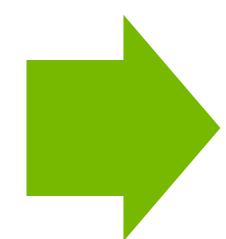

# Let's Get Started

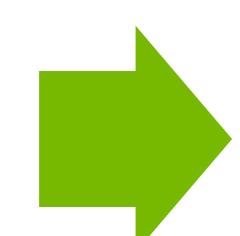

#### Beginning of Artificial Intelligence

Computers are made in part to complete human tasks

Early on, generalized intelligence looked possible

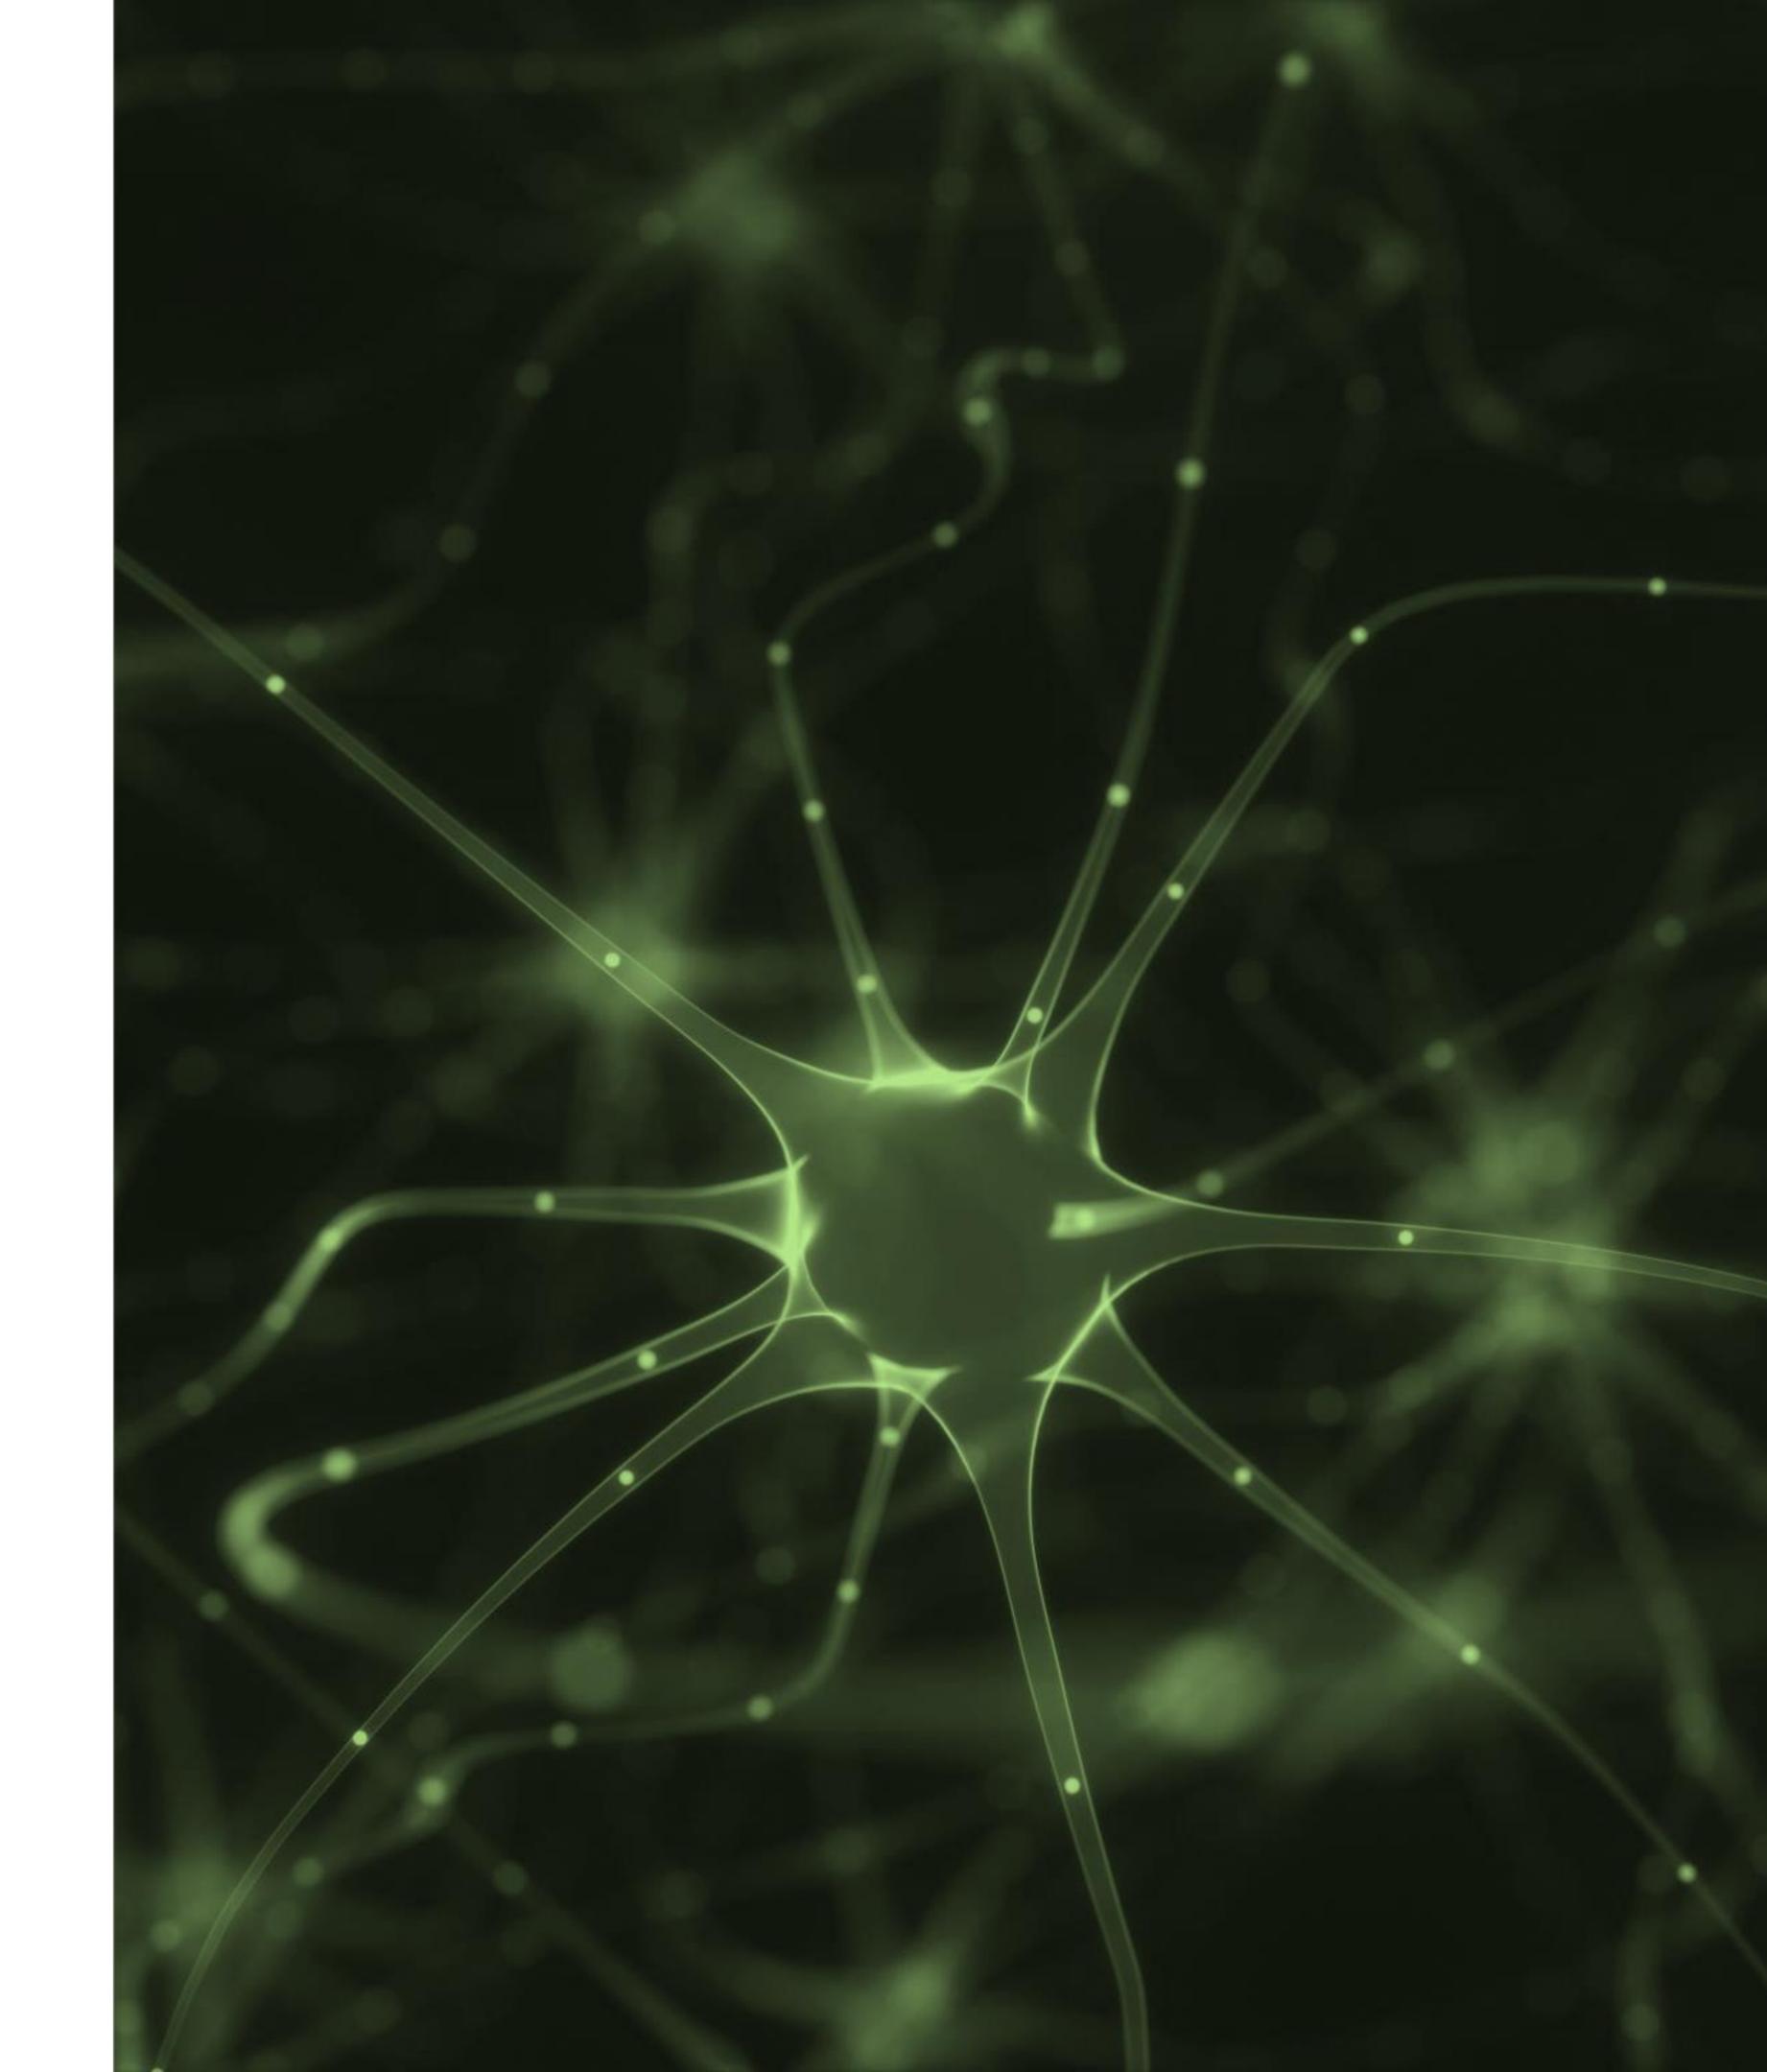

Turned out to be harder than expected

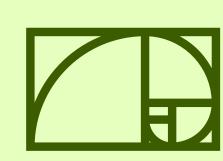

## Early Neural Networks

- Inspired by biology
- Created in the 1950's
- Outclassed by Von Neumann Architecture

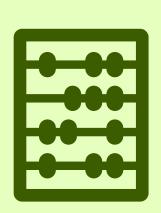

#### **Expert Systems**

Highly complex

Programmed by hundreds of engineers

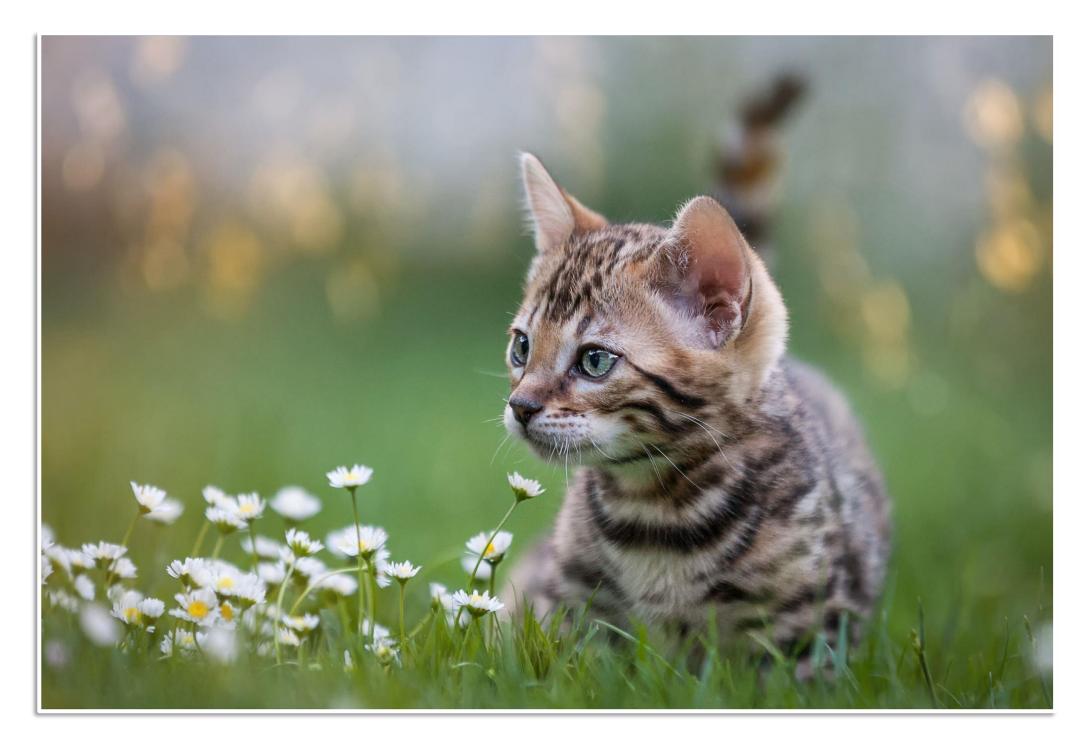

Rigorous programming of many rules

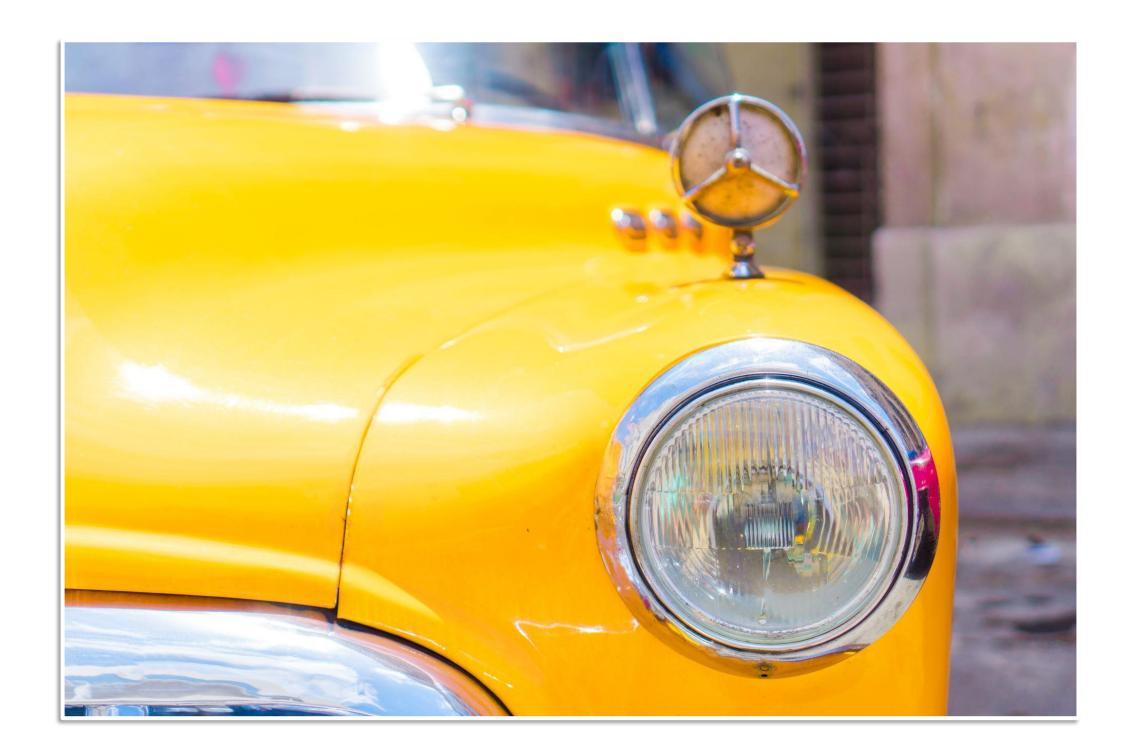

## **Expert Systems - Limitations**

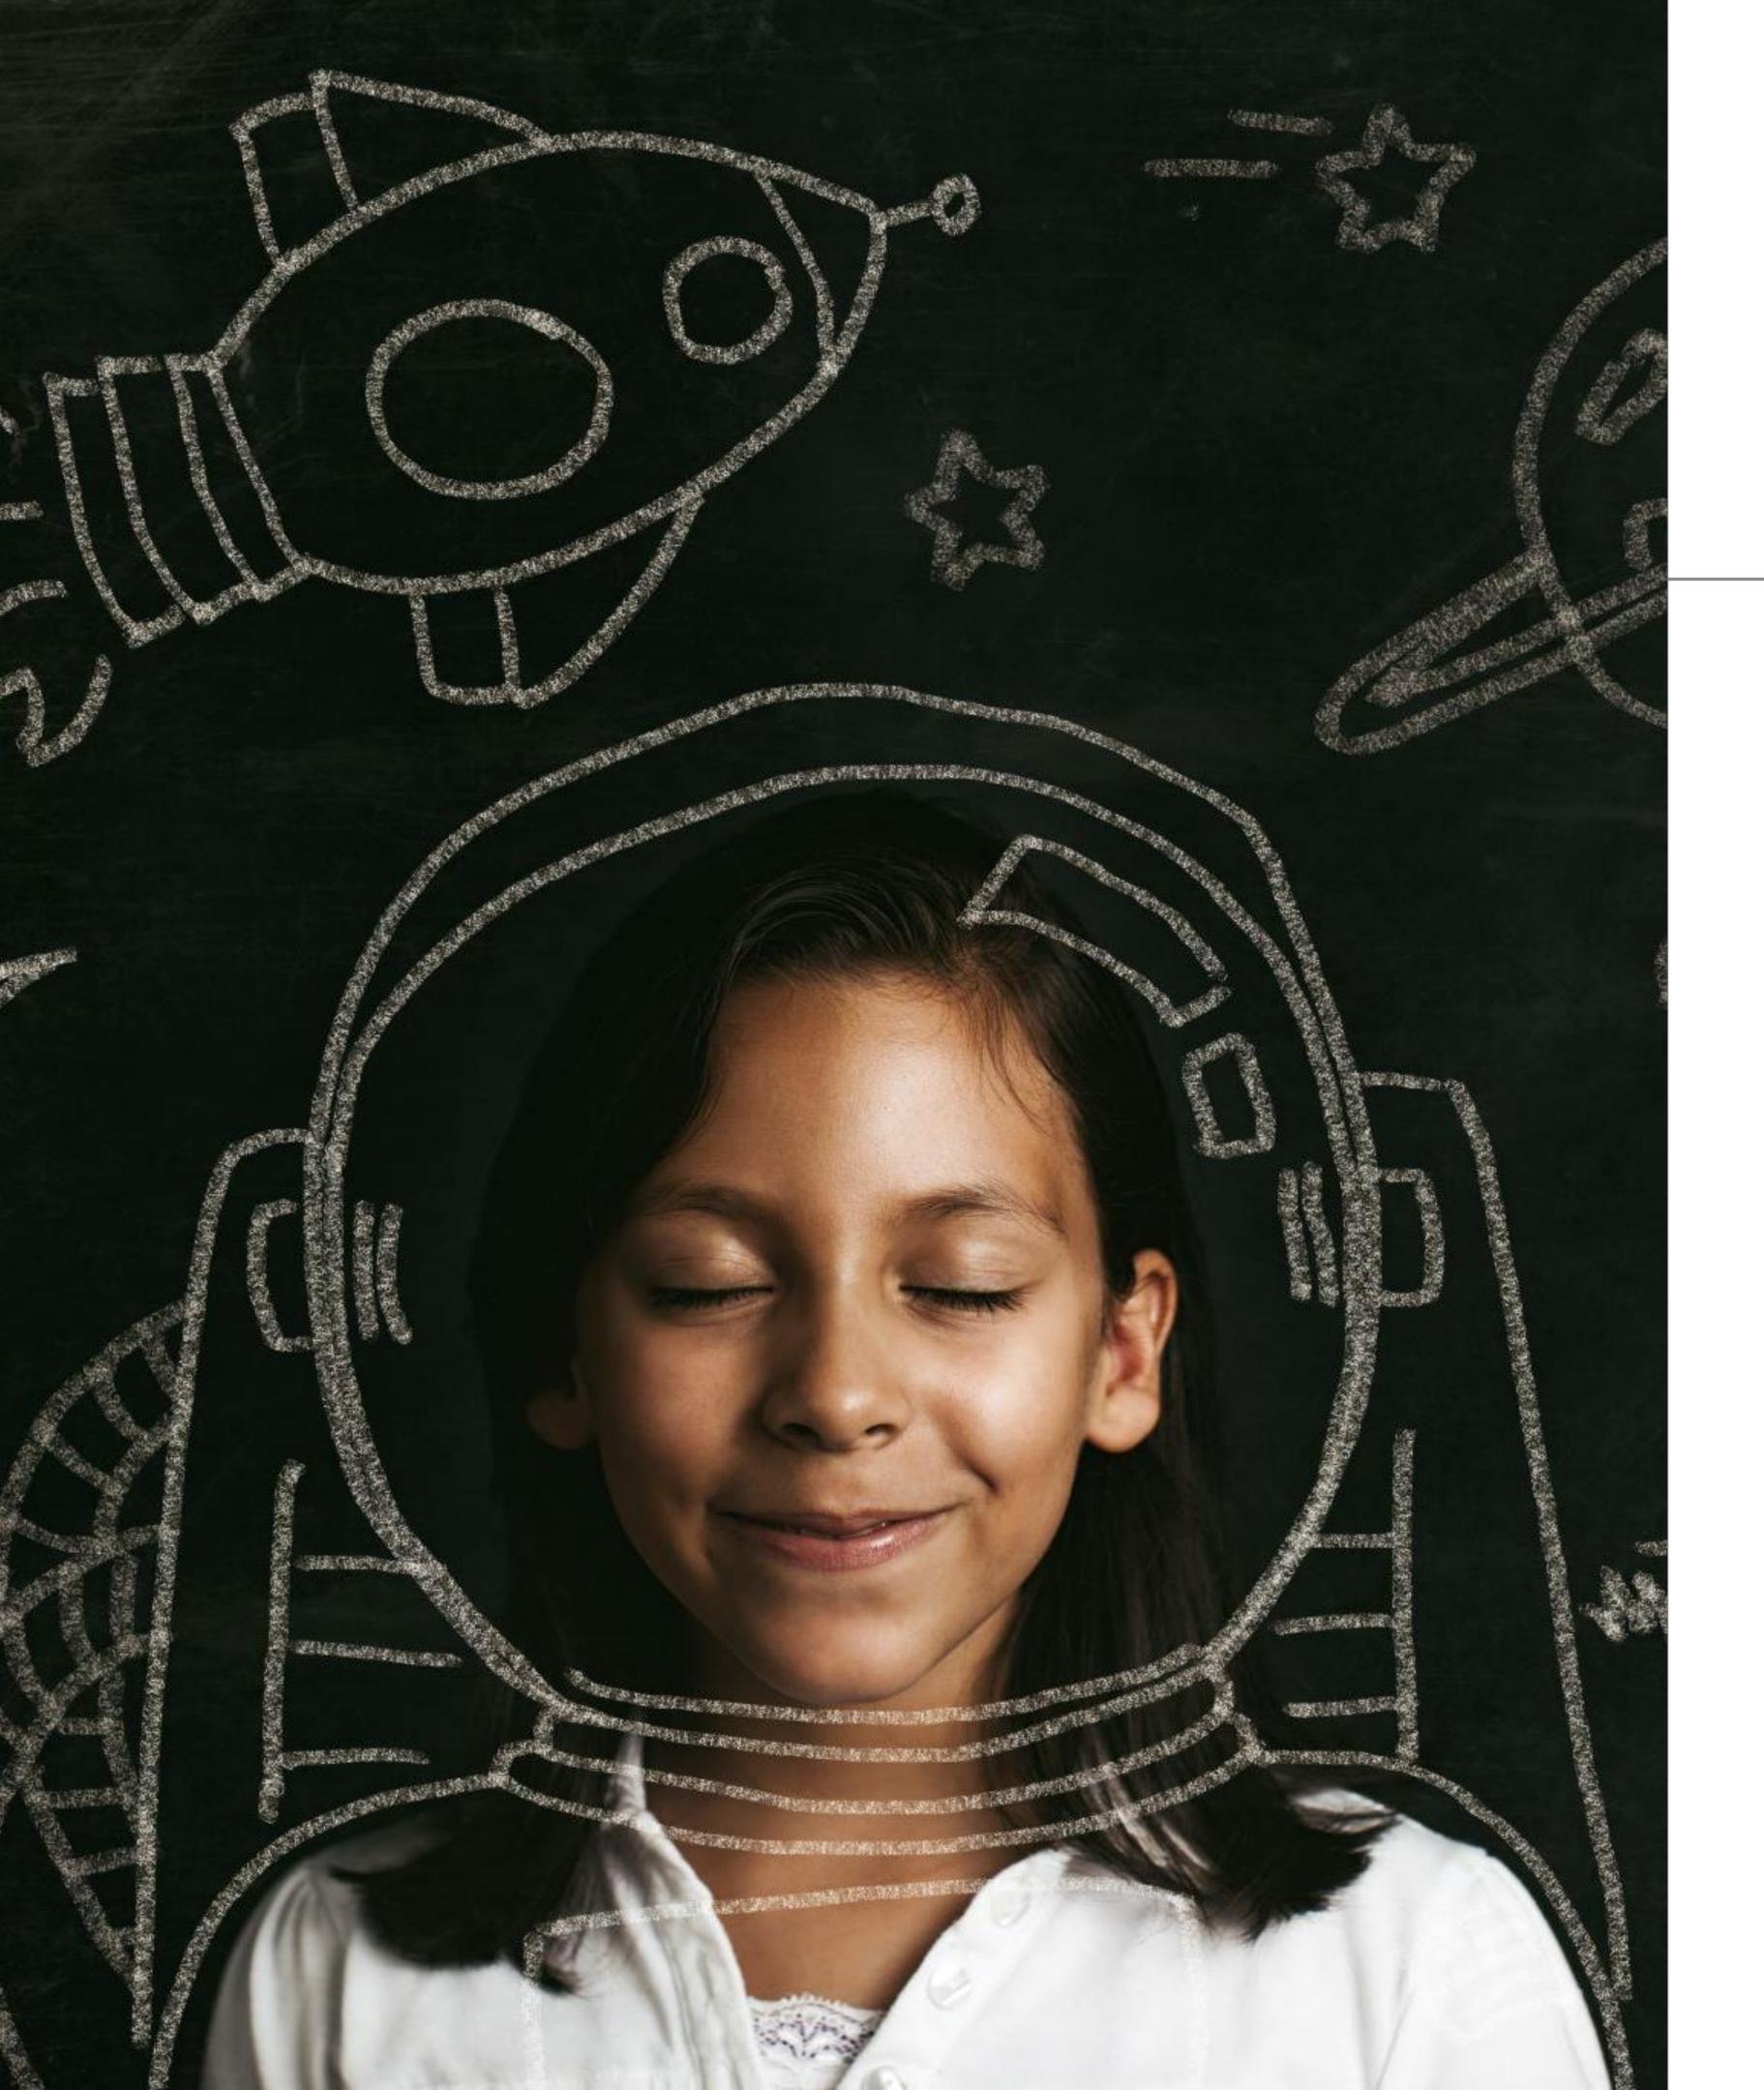

What are these three images?

#### How Do Children Learn?

- Expose them to lots of data
- •Give them the "correct answer"
- They will pick up the important patterns on their own

#### Data

- Networks need a lot of information to learn from
- The digital era and the internet has supplied that data

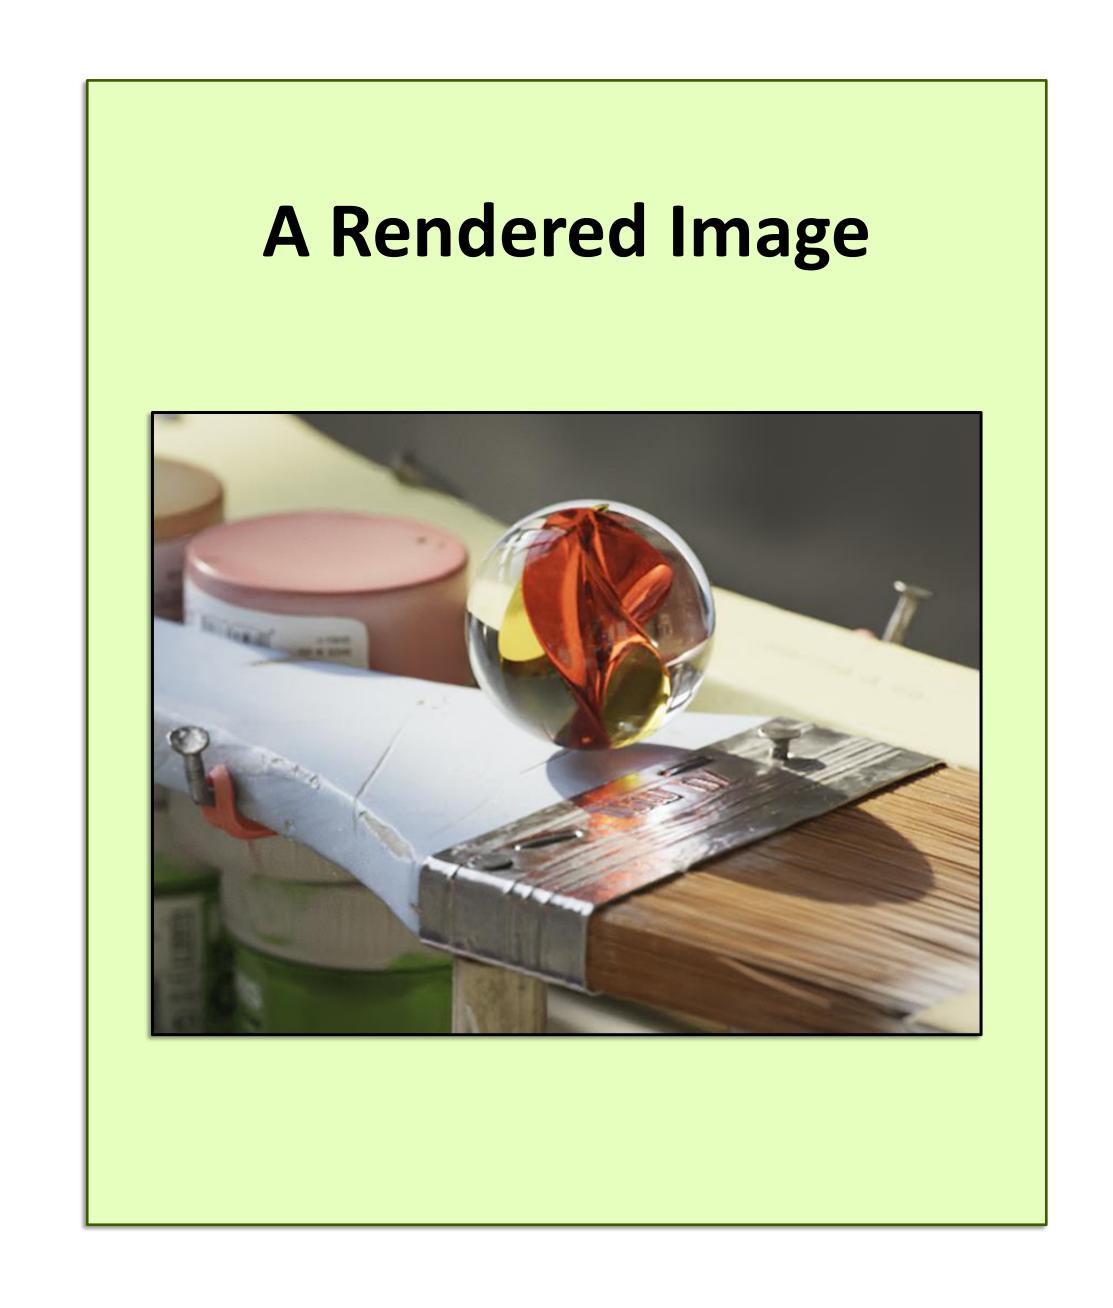

# **Computing Power**

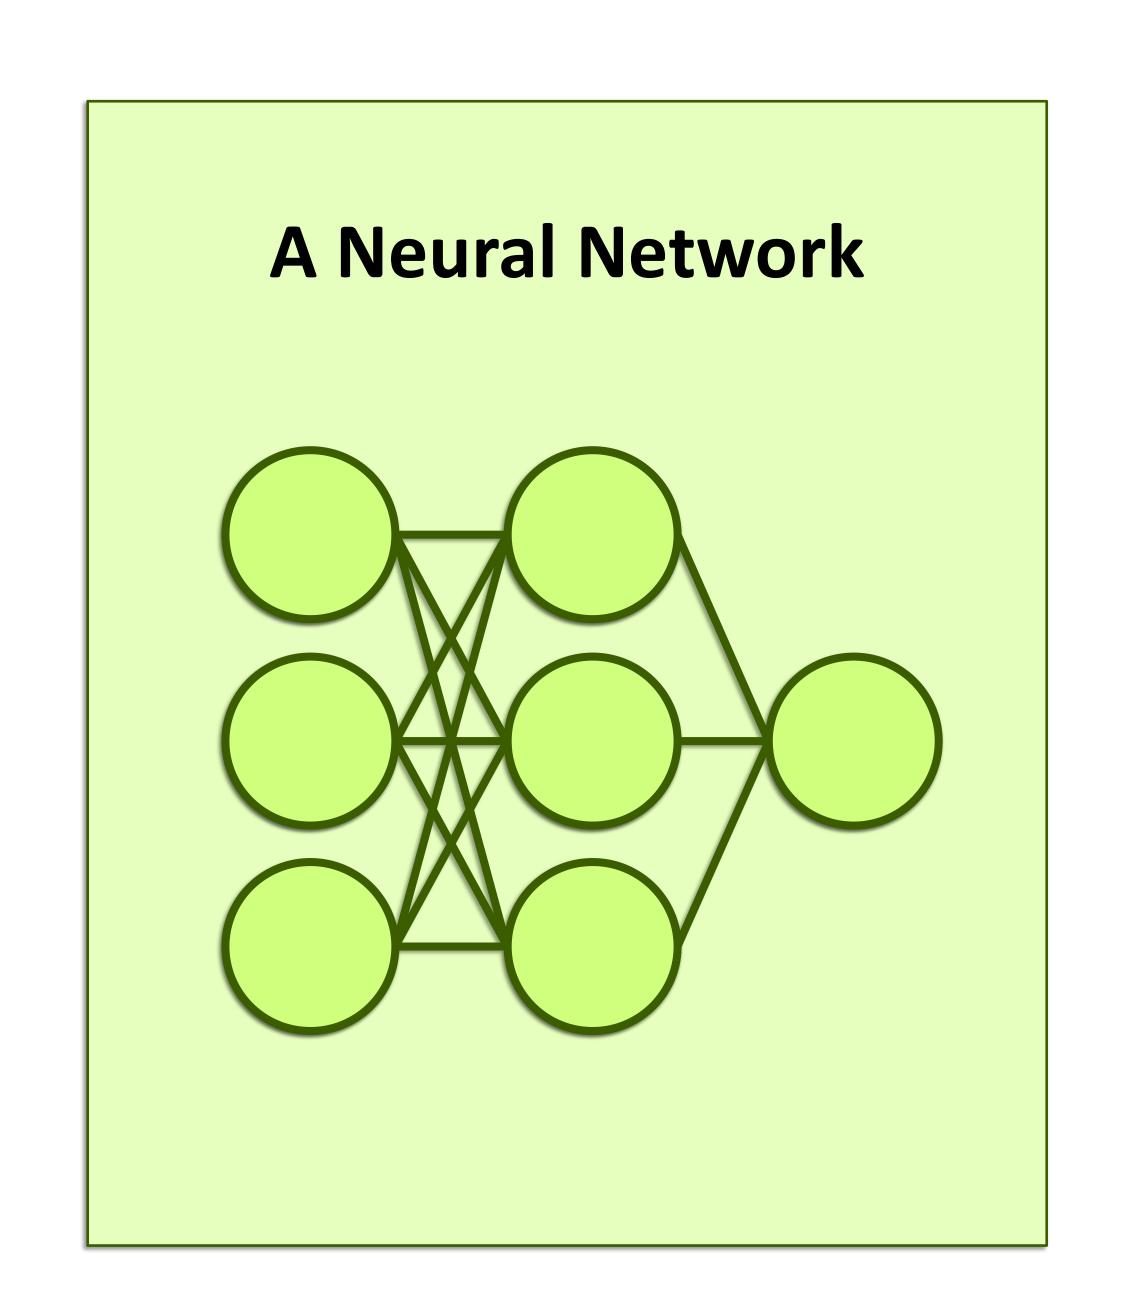

Need a way for our artificial "brain" to observe lots of data within a practical amount of time.

## The Importance of the GPU

# Deep learning flips traditional programming on its head

#### Traditional Programming

**Building a Classifier** 

Define a set of rules for classification

Program those rules into the computer

Feed it examples, and the program uses the rules to classify

#### Machine Learning

Building a Classifier

Show model the examples with the answer of how to classify

Model takes guesses, we tell it if it's right or not

Model learns to correctly categorize as it's training. The system learns the rules on its own

#### When to Choose Deep Learning

# Classic Programming

If rules are clear and straightforward, often better to program it

# Deep Learning

If rules are nuanced, complex, difficult to discern, use deep learning

#### Deep Learning Compared to Other Al

Depth and complexity of networks Up to billions of parameters (and growing) Many layers in a model Important for learning complex rules

# How Deep Learning is Transforming the World

#### Computer Vision

#### Natural Language Processing

#### Recommender Systems

#### Reinforcement Learning

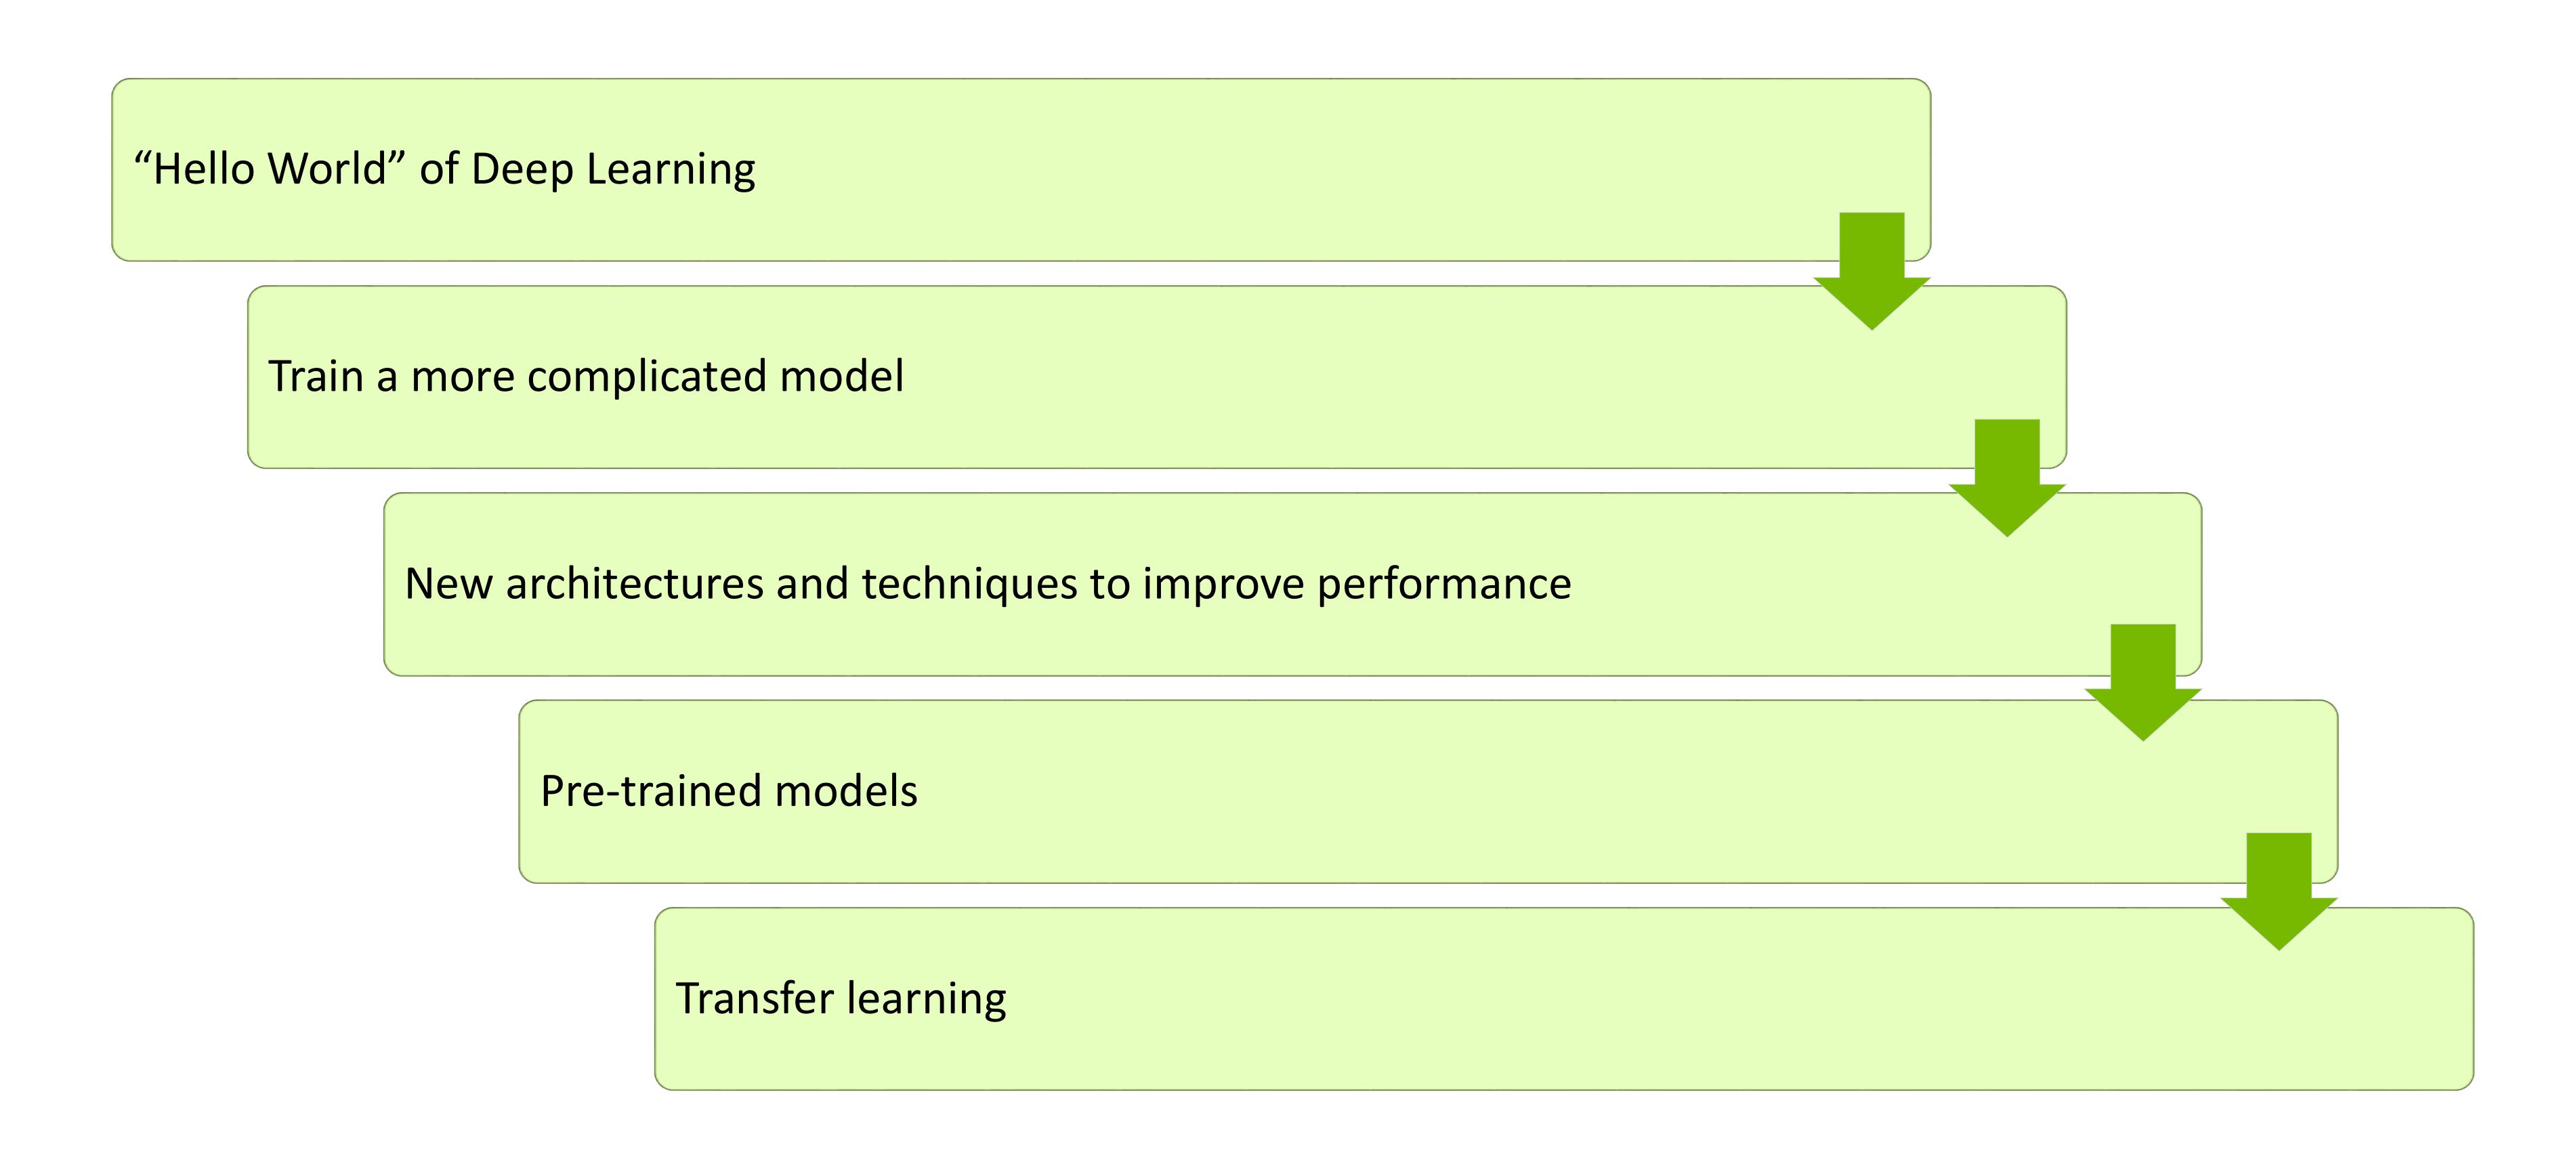

#### Hands on Exercises

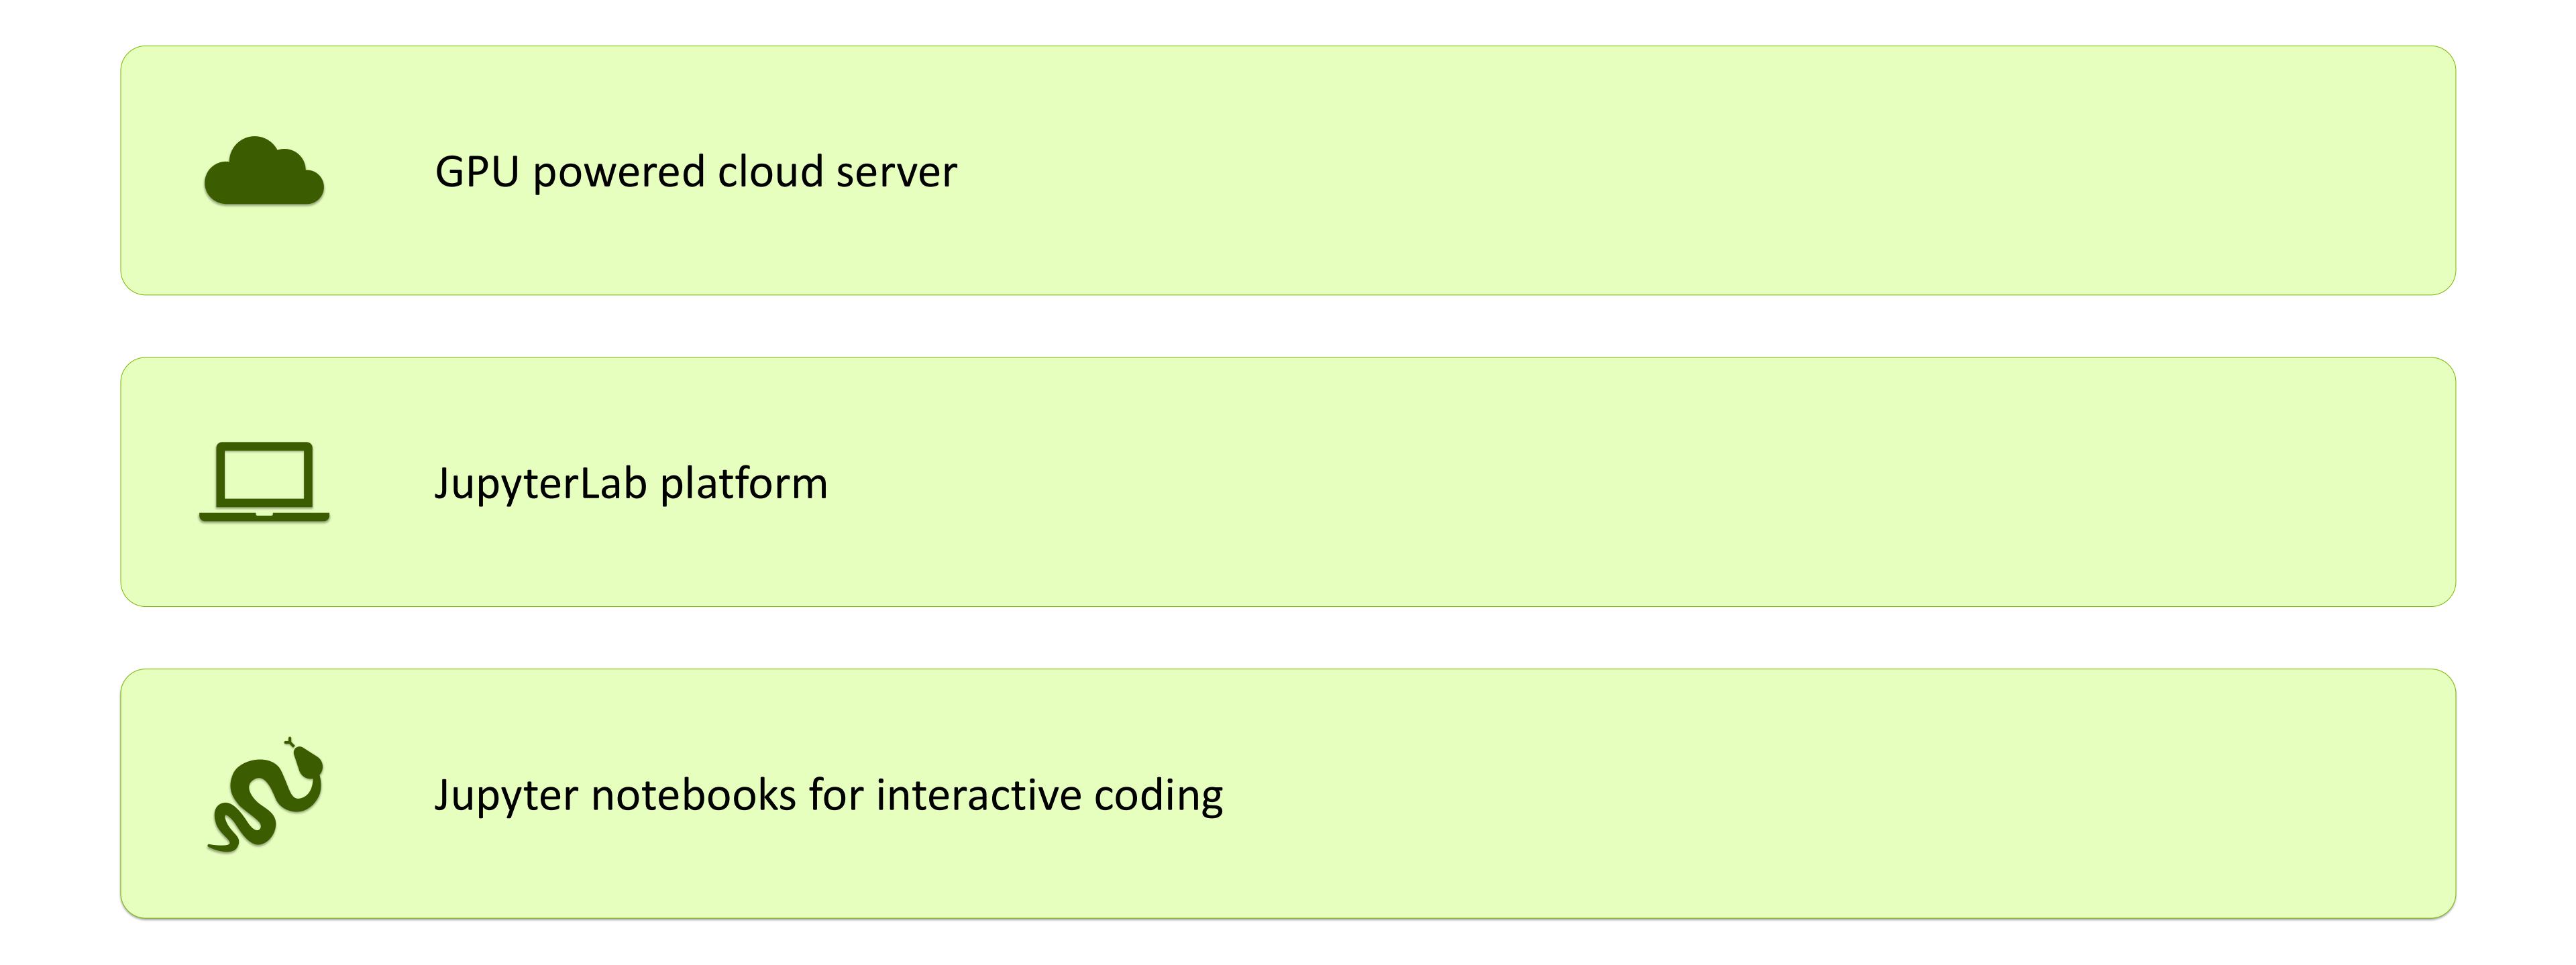

- Get comfortable with the process of deep learning
- Exposure to different models and datatypes
- Get a jump-start to tackle your own projects

#### Structure of the Course

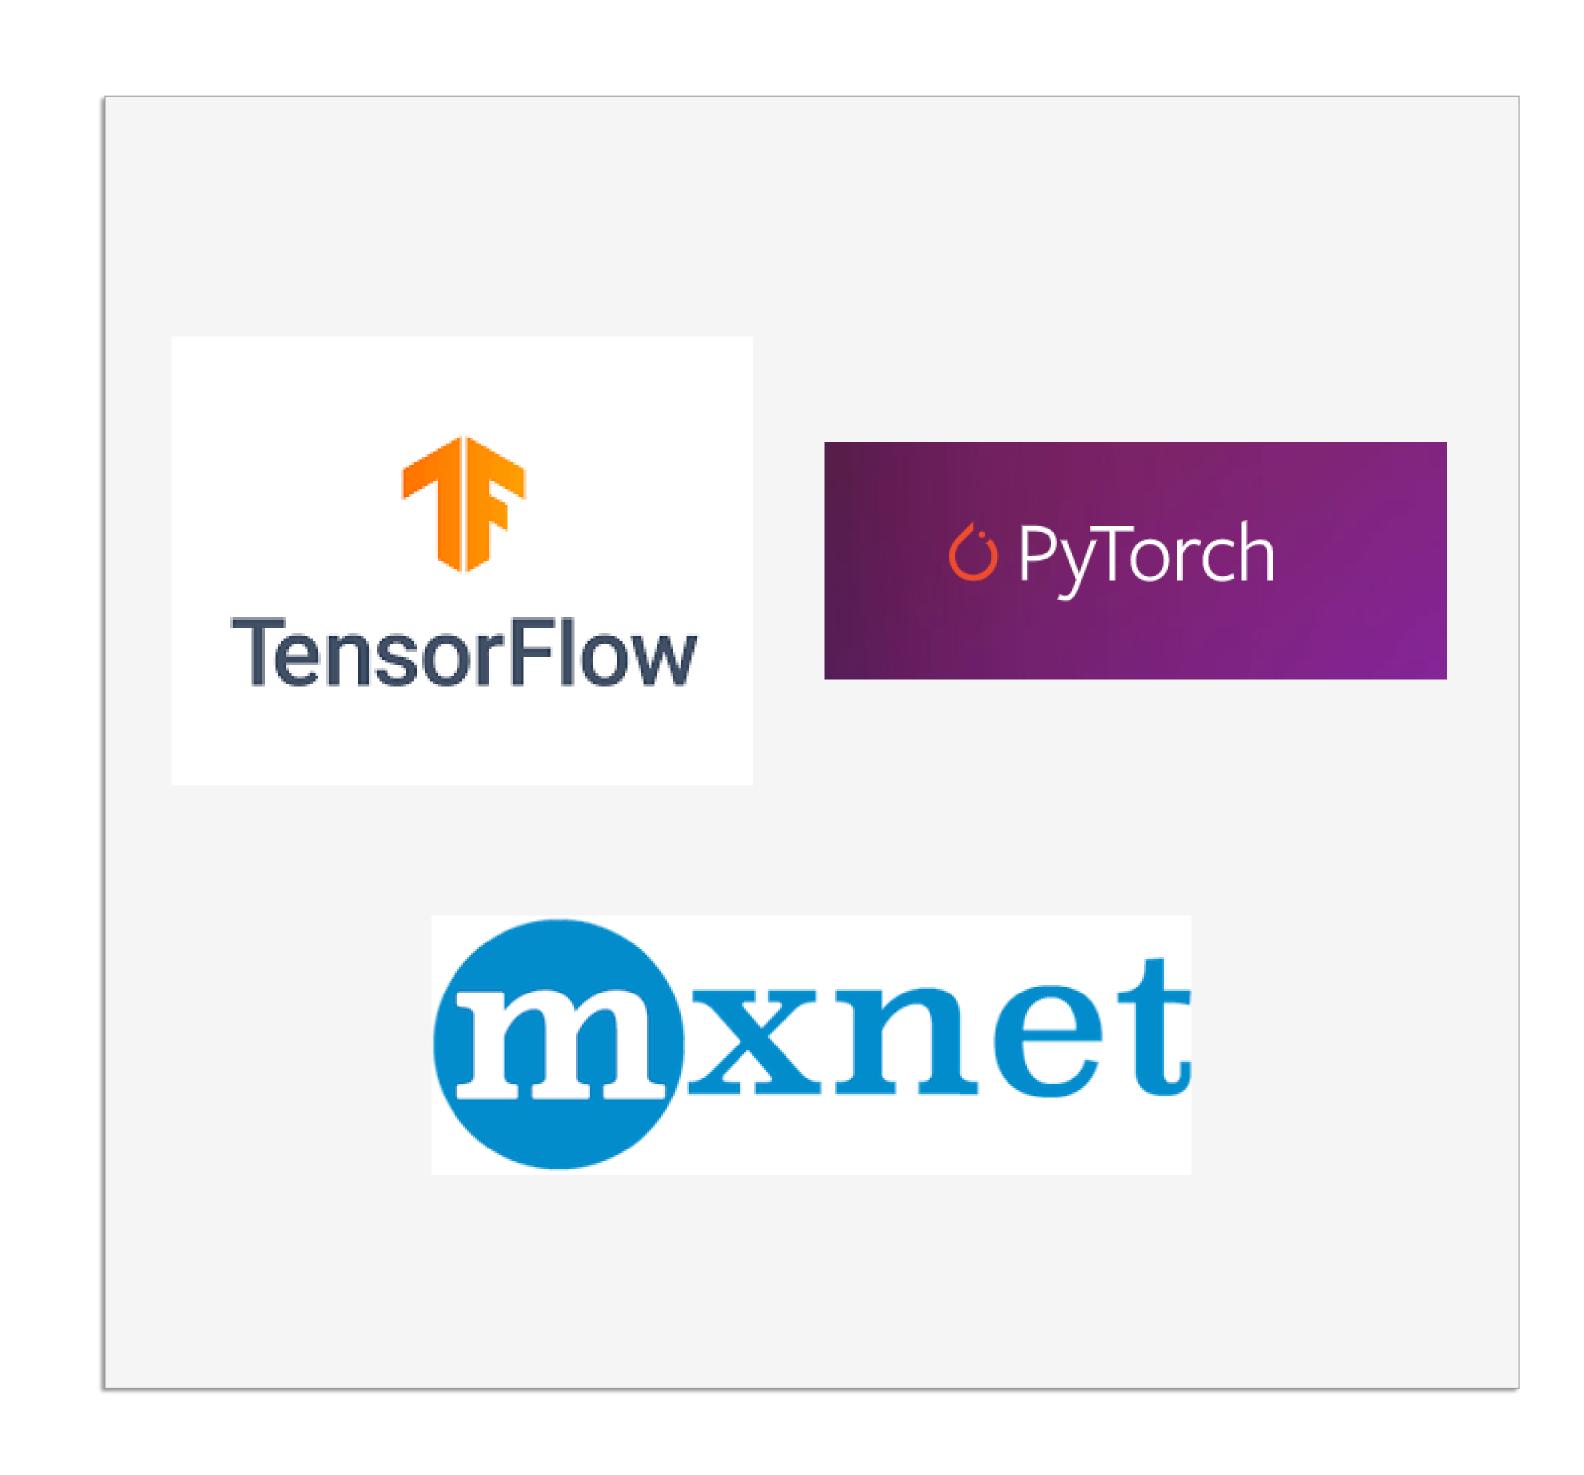

#### Platform of the Course

#### **Software of This Course**

- Major deep learning platforms:
  - TensorFlow + Keras (Google)
  - PyTorch (Meta)
  - MXNet (Apache)
- We'll be using PyTorch
- Good idea to gain exposure to others moving forward

#### Hello Neural Networks

Train a network to correctly classify handwritten digits

Historically important and difficult task for computers

Try learning like a Neural Network

Get exposed to the example, and try to figure out the rules to how it works
